Intelligent Control of Connected Plug-in Hybrid Electric Vehicles Jul 18 2021

Intelligent Control of Connected Plug-in Hybrid Electric Vehicles presents the development of real-time intelligent control systems for plug-in hybrid electric vehicles, which involves control-oriented modelling, controller design, and performance evaluation. The controllers outlined in the book take advantage of advances in vehicle communications technologies, such as global positioning systems, intelligent transportation systems, geographic information systems, and other on-board sensors, in order to provide look-ahead trip data. The book contains simple and efficient models and fast optimization algorithms for the devised controllers to address the challenge of real-time implementation in the design of complex control systems. Using the look-ahead trip information, the authors of the book propose intelligent optimal model-based control systems to minimize the total energy cost, for both grid-derived electricity and fuel. The multilayer intelligent control system proposed consists

of trip planning, an ecological cruise controller, and a route-based energy management system. An algorithm that is designed to take advantage of previewed trip information to optimize battery depletion profiles is presented in the book. Different control strategies are compared and ways in which connecting vehicles via vehicle-to-vehicle communication can improve system performance are detailed. Intelligent Control of Connected Plug-in Hybrid Electric Vehicles is a useful source of information for postgraduate students and researchers in academic institutions participating in automotive research activities. Engineers and designers working in research and development for automotive companies will also find this book of interest. Advances in Industrial Control reports and encourages the transfer of technology in control engineering. The rapid development of control technology has an impact on all areas of the control discipline. The series offers an opportunity for researchers to present an extended exposition of new work in all aspects of industrial control.

***Cataloging with AACR2 and MARC21 Jan 24
2022 Recent changes in both cataloging
rules (AACR2) and MARC coding standards
(MARC21) mean that for catalogers to
create or edit records effectively, they need***

new up-to-date guidance. In a unique one-stop guide, cataloging expert Fritz provides the hands-on cross-references between AACR2 and MARC21 required for easy online cataloging. The 2006 Cumulation brings the second edition up-to-date with the inclusion of the 2004, 2005, and 2006 updates.

Designed to streamline the process and avoid errors, the book is organized in order of MARC tags. Following this step-by-step guide, users can: Identify the rules that govern each MARC field Match resources to records Edit records Create new records easily Clone records for different editions Make individual MARC records "play well" with others in the database. Beginning catalogers can use this guide to create simple records while experienced catalogers will be able to identify specific rules. Fritz also helps copy catalogers pick better matching records, and systems librarians understand the content of records at the core of their collections. Providing clear, practical, easy-to-use guidance, this authoritative reference is the premier resource for students and instructors as a basis for creating and editing consistently

good MARC records. Available in loose-leaf format to fit in a standard 3-ring binder.

Handheld and Ubiquitous Computing Dec 23 2021 Truly personal handheld and wearable technologies should be small and unobtrusive and allow access to information and computing most of the time and in most circumstance. Complimentary, environment-based technologies make artifacts of our surrounding world computationally accessible and facilitate use of everyday environments as a ubiquitous computing interface. The International Symposium on Handheld and Ubiquitous Computing, held for the first time in September 1999, was initiated to investigate links and synergies in these developments, and to relate advances in personal technologies to those in environment-based technologies. The HUC 99 Symposium was organised by the University of Karlsruhe, in particular by the Telecooperation Office (TecO) of the Institute for Telematics, in close collaboration with ZKM Karlsruhe, which generously hosted the event in its truly inspiring Center for Arts and Media Technology. The symposium was supported

by the Association of Computing Machinery (ACM) and the German Computer Society (Gesellschaft für Informatik, GI) and held in cooperation with a number of special interest groups of these scientific societies. HUC 99 attracted a large number of paper submissions, from which the international programme committee selected 23 high-quality contributions for presentation at the symposium and for inclusion in these proceedings. In addition, posters were solicited to provide an outlet for novel ideas and late-breaking results; selected posters are also included with these proceedings. The technical programme was further complemented by four invited keynote addresses, and two panel sessions.
