This book establishes the foundations needed to realize the ultimate goals for artificial intelligence, such as autonomy and trustworthiness. Aimed at scientists, researchers, technologists, practitioners, and students, it brings together contributions offering the basics, the challenges and the state-of-the-art on trusted autonomous systems in a single volume. The book is structured in three parts, with chapters written by eminent researchers and outstanding practitioners and users in the field. The first part covers foundational artificial intelligence technologies, while the second part covers philosophical, practical and technological perspectives on trust. Lastly, the third part presents advanced topics necessary to create future trusted autonomous systems. The book augments theory with real-world applications including cyber security, defence and space. 'This new edition helps the reader better understand their role in the school and classroom, in the complex and constantly changing world of education. It provides excellent support for helping the reader develop greater effectiveness in their classroom practice, both through exploring the theory that underpins the topics covered and by providing practical support and advice' - Gianna Knowles, Co-ordinator for the Foundation Degree in Teaching and Learning Support and Primary Senior Lecturer in Education, University of Chichester If you're studying for a Foundation Degree or seeking Higher Level Teaching Assistant (HLTA) status, this is the book you need on your shelf. FIA - Foundations in Audit (INT) - FAU Study Text 2013 This volume provides a comprehensive introduction to foundational topics in sound design for interactive media, such as gaming and virtual reality; compositional techniques; new interfaces; sound spatialization; sonic cues and semiotics; performance and installations; music on the web; augmented reality applications; and sound producing software design. The reader will gain a broad understanding of the key concepts and practices that define sound design for its use in computational media and design. The chapters are written by international authors from diverse backgrounds who provide multidisciplinary perspectives on sound in its interactive forms. The volume is designed as a textbook for students and teachers, as a handbook for researchers in sound, design and media, and as a survey of key trends and ideas for practitioners interested in exploring the boundaries of their profession. There has been much public praise for the Bill and Melinda Gates Foundation's efforts to reform public education. However, few scholars have engaged substantively and critically with the organization's work. While the Gates Foundation is the single largest supporter by far of "choice" initiatives particularly with regard to charter school formation, it is pushing public school privatization through a wide array of initiatives and in conjunction with a number of other foundations. What are the implications for a public system as control over educational policy and priority is concentrated under one of the richest people on the planet in ways that foster de-unionization and teacher de-skilling while homogenizing school models and curriculum? The Gates Foundation and the Future of US "Public" Schools addresses this crucial, unanswered question while investigating the relationships between the Gates Foundation and other think tanks, government, and corporate institutions. FIA Foundations in Audit (UK) - FAU -Kit This book constitutes the refereed proceedings of the 21st Brazilian Symposium on Formal Methods, SBMF 2018, which took place in Salvador, Brazil, in November 2018. The 16 regular papers presented in this book were carefully reviewed and selected from 30 submissions. The papers are organized in topical sections such as: techniques and methodologies; specification and modeling languages; theoretical foundations; verification and validation; experience reports regarding teaching formal methods; and applications. Unique in all the world, the American foundation sector has been an engine of social change for more than a century. In this companion volume to *The Foundation: A Great American Secret*, Joel Fleishman, Scott Kohler, and Steven Schindler explore 100 of the highest-achieving foundation initiatives of all time. Based on a rich array of sources -- from interviews with the principals themselves to contemporaneous news accounts to internal evaluation reports -- this volume presents brief case studies of foundation success stories across virtually every field of human endeavor. The influence of the foundations on American, and indeed global society, has only occasionally come into the public view. For every well-known foundation achievement -- Andrew Carnegie's massive library building program or the Robert Wood Johnson Foundation's public efforts to curb tobacco use -- there are a great many lesser-known, but often equally important stories to be told. The cases in this volume provide a wealth of evidentiary support for Joel Fleishman's description of, and recommendations for, the foundation sector. With lessons for grant-makers, grant-seekers, public officials, and public-spirited individuals alike, this casebook pieces together 100 stories, some well known, others never before told, and offers hard proof of the foundation sector's immense and enduring impact on scientific research, education, public policy, and many other fields. The work that foundations have supported over the past century has achieved profound results. Yet foundations are capable of more and better. This volume, a window onto great successes of the past and present, is at once a look back, a look around, and a point of reference as we turn to the future.
